Education

Georgia Institute of Technology Expected May 2027

Bachelor of Science and Master of Science in Computer Science, GPA: 4.0/4.0 *Atlanta, GA*

- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Object-Oriented Design, Machine Learning, Artificial Intelligence, Computer Architecture, Database Systems, Computer Networking
- Awards: USACO Gold Division, Faculty Honors, Dean's List

Experience

DoorDash May 2025 – August 2025

Software Engineering Intern *San Francisco, CA*

- Developed Iceberg migration **backfill service** with transformation logic to normalize inconsistent legacy schemas
- Built multi-threaded **PySpark pipeline** utilizing custom Java (Py4J) listeners to log real-time backfill progress
- Cut backfill cost by **76%** and time by **57%** by optimizing data writes and batching updates to reduce thread locks
- Reduced manual intervention by **96%** by streamlining backfills with Java REST APIs and data validation layers
- Improved reliability of Flink routing system handling **130k+** telemetry req/s with robust exception handling logic

Hubbell Incorporated May 2024 – August 2024

Software Engineering Intern *Greenville, SC*

- Developed .NET REST APIs in C# and React dashboard to return users' requested quotation form downloads, replacing manual downloads to achieve a **97%** reduction in time per download and handling **150+** requests daily
- Reduced server load by **68%** by implementing **WebSocket pub-sub** model to notify when downloads complete
- Built C# service and Azure CRON job to review & send OTPs to **18,000**+ old accounts, saving team **30+** hrs/qtr

TSBand July 2022 – April 2023

Lead Developer and Researcher *Philadelphia, PA*

- Created wristband to detect Tourette's Syndrome tic attacks using various data collected by wristband sensors
- Developed LOF and Long Short-Term Memory models in TensorFlow with **92%** accuracy to determine tic attacks
- Published co-first authored research paper on efficacy of models in the **Journal of Medical Internet Research**
- Built mobile companion app for patient dashboard and caretaker alert notifications with Flutter and Firebase

Projects

Custom Redis Database

C++

- Developed **custom in-memory** key-value data store from scratch in C++ with high throughput and low latency
- Designed custom bulk string command parser and execution engine to support **RESP protocol** commands
- Built multi-client support using a detached **multi-threaded** approach to handle concurrent client connections

Volunteering Event Aggregator

React, Chakra UI, JavaScript, Django, Python, PostgreSQL

- Developed full-stack webapp to aggregate local volunteering events & track service hours for individual volunteers
- Implemented **CRUD** operations with Python and PostgreSQL and built frontend with React and JavaScript
- Integrated platform with local high school, allowing **750+ students** to record graduation service hours digitally

Chinese Handwriting App

Flutter, Dart, Firebase

- Created Flutter app to teach Chinese character handwriting by animating stroke order of **5,000+ characters**
- Quizzed users by tracking drawing input on screen coordinates and comparing to predefined character SVG path

Skills

Languages: C/C++, Python, Java, JavaScript, C#, Dart, HTML/CSS, SQL
Technologies: React, .NET, Django, Node.js, Flutter, TensorFlow, Docker, Google Cloud Platform, Azure
Concepts: Web Frameworks, Software Engineering, Frontend, Backend, Fullstack, RESTful API, Machine Learning, Human Computer Interaction, Data Science, Data Analysis, Cloud Computing, Virtual Memory, Multithreading, Parallel Programming, Microservice Architecture, Agile, DevOps, CI/CD, Blockchain, Statistics, Probability, NLP
